Lecture 1

Rationalists

- Reason and innate knowledge → acquire knowledge
- Fundamental truths and principles can be known independent of experience
- A priori reasoning
 - Reason and deduction

Empiricists

- Experience and sensory perception → acquire knowledge
- All knowledge is derived from experience and observation of the external world
- A posteriori reasoning

Cogito, ergo sum

In *Meditations on First Philosophy* the philosopher [René Descartes](#) describes a series of doubts about the nature of reality, arriving at the famous phrase:

[I think therefore I am](#)

He argues that doubting requires thinking, and therefore, the act of thinking confirms his existence.
